

A SCALABLE, FLEXIBLE SOLUTION TO COAL

As demand for coal energy declines, NuScale's advanced SMR technology is designed to seamlessly repurpose existing plants.

When NuScale set out to change the power that changes the world, we did not follow the one-size-fits-all approach found with most SMR's. Each customer has unique energy needs -and our SMR modules are designed to keep that in mind while also being scalable and flexible. For instance, rather than constructing entire new facilities to replace coal energy, our modules allow you to repurpose the locations of existing plants. This enables you to greatly reduce financial risk and also ensures that the advanced NuScale technology you employ will always maintain the industry-leading safety margins. For more information on the many unique NuScale advantages we offer, please visit nuscalepower.com.
