

# CARBON FREE + RENEWABLES = THE FUTURE OF ENERGY

Carbon-free NuScale SMR technology is the ideal complement to renewable wind and solar energy.

From this point forward, the world can literally breathe easier, because NuScale SMR technology has unlocked a new era of energy that's compatible with wind, solar and other renewable energy sources. NuScale Power Modules™ are designed to provide flexible, scalable energy solutions that produce zero harmful emissions. There's an innovative NuScale application for every need and situation. For example, a single module produces 77 megawatts of carbon-free electricity, enough to power a community of 60,000 homes. A full-sized, 12-module plant can fulfill the energy needs of 700,000 U.S. households. Our modules are reliable, cost competitive and meet the strictest safety standards. It has always been our mission at NuScale to change the power that changes the world. We invite you to see how that mission is being accomplished, and what it can mean for you at [nuscalepower.com](https://www.nuscalepower.com)
