

ENERGY SOLUTIONS THAT ADAPT TO YOUR NEEDS

NuScale can simplify operations, reduce carbon emissions and more, with smaller innovative power plant solutions.

There is an exciting world-changing future of energy on the horizon. It's a future of cleaner air, increased reliability and smarter solutions for all of humankind. And best of all, the technology to make it happen for you is available now from NuScale. Our flexible power plants have the capability to supply energy for electrical generation, district heating, desalination, and many other applications to fit your specific needs. Our advanced NuScale Power Module™ can safely generate 77 MW of electricity, with zero carbon emissions. Our scalable design also allows a single power plant the ability to house 4, 6 or 12 individual power modules based on your needs—dramatically reducing the financial commitments associated with gigawatt-sized facilities. Learn more about breakthrough NuScale energy, and the revolutionary possibilities it presents for you, at nuscalepower.com.
