The nuclear industry’s most trusted supplier

Nuclear power plant operators and designers want safety-related systems that work for multiple decades without major upgrades. Previous generation safety-related digital I&C systems fell short of this expectation, proving difficult to manage under current cybersecurity and regulatory constraints.

The SER-approved HIPS FPGA platform was designed to address these challenges and make safety-related digital I&C systems easier to install and maintain.

HIPS performs with robust, analog-like reliability while providing essential diagnostics to enable plants to reduce O&M costs.
