

LETTER TO THE EDITOR

TOPICAL AREAS FOR NT/F ARTICLES¹

I wish to suggest that Fusion-Fission Hybrid Reactors be designated as a topical area by itself. This is justified, I think, in view of the importance of this subject (both the U.S. Department of Energy ERAB and an Electric Power Research Institute committee recently recommended more aggressive hybrid research and development) and its promise for the earliest contribution to fusion. Moreover, it is likely to interest a large fraction (if not the majority) of the readership of *Nuclear Technology/Fusion*.
