

## Corrigendum

The article by Martini and Gerosa, "Venting Device for Sodium-Cooled Fast Reactor Ceramic Fuel Elements," was published in the August 1973 issue without benefit of the authors' corrections on the galleys, as noted. The authors have pointed out a number of clarifying notes for their Fig. 14. Small secondary bubbles trail the large bubbles indicated in the top of that figure. The presence of these bubbles is indicated by the small blip in the valley of the gas bubble growth curves. The bubble transit time is shown by the width of the flat part on the top of the bubble growth curve. The lower valve opens at the first departure from horizontal in the bottom curve.
