

PREFACE

MATERIALS IN WASTE STORAGE

This series of papers was presented at the June 16, 1976 Toronto meeting of the American Nuclear Society, held in conjunction with the Canadian Nuclear Society. The Materials in Waste Storage Program was arranged by Warren Eister, author of the first paper. His paper discusses the objectives and scope of the session, which considered high-level wastes. The importance of this subject to the utilization of nuclear energy is well recognized, and this group of papers makes a significant contribution to the literature in this vital area. *RGP.*
