

## CONTENTS / FEBRUARY 1988—VOL. 80, NO. 2

### ADVANCED LIGHT WATER REACTORS

#### TECHNICAL PAPERS

- 181 Preliminary Results of the Feasibility Study on the Convertible Spectral Shift Reactor Concept / *D. Hittner, J. P. Millot, A. Vallee*
- 190 The High Gain Light Water Breeder Reactor with a Uranium-Plutonium Cycle / *Alvin Radkowsky, Z. Shayer*
- 216 Analysis of  $^{235}\text{U}$ -Pu- $^{238}\text{U}$ -Fueled Tight-Lattice Water Reactors / *Yigal Ronen, Melvin J. Leibson*
- 225 On the Reactivity Void Response of an Advanced Pressurized Water Reactor / *Yigal Ronen, Melvin J. Leibson, Alvin Radkowsky*
- 240 Validation of the HELIOS.HX Code for High Conversion Light Water Reactor Lattice Analysis / *Munenari Yamamoto, Koichi Sakurada, Hiroshi Mizuta, Kakuji Makino*
- 250 The Effect of Fission Products on Burnup Characteristics in High Conversion Light Water Reactors / *Hideki Takano, Kunio Kaneko, Hiroshi Akie, Yukio Ishiguro*
- 263 Fission Product Model for Lattice Calculation of High Conversion Boiling Water Reactor / *Shungo Iijima, Tadashi Yoshida, Tohru Yamamoto*
- 269 The French Neutronic Program Addressing the Requirements of Future Pressurized Water Reactors / *Jean Bergeron, Michel Darrouzet, Jean-Michel Gomit, Richard Lenain, Jean-Louis Nigon, Loïck Martin-Deidier*
- 282 Constraints on the Plutonium Recovery Achievable in Homogeneous Pressurized Water Reactors / *Klaus Penndorf*
- 292 Analytical Methods in the High Conversion Reactor Core Design / *Wilfried Zeggel, Werner Oldekop, Joachim K. Axmann, Sven Bethke, Helmut Moldaschl, Gerhard Ulrych, Hans-Dieter Berger*
- 311 Investigation of the Void Coefficient and Other Integral Parameters in the PROTEUS-LWHCR Phase II Program / *Rudolf Seiler, Rakesh Chawla, Kurt Gmür, Helmut Hager, Hans-Dieter Berger, Roland Böhme*
- 324 Reactor Physics Calculations for Alternative Fuel Recycling Strategies Using Tight Pressurized Water Reactor Lattices / *Erik Johansson*

#### DEPARTMENT

- 175 Authors

#### ON THIS COVER

This month's cover is taken from Fig. 9b in the paper by Zeggel et al.
