Volume 27

April 1995

CITATIONS ARE BY PAGE NUMBER

A

- Adiabatic evolution of axisymmetric rotating plasma, 463
- Advanced fuels, 28, 567
 - direct conversion issues, 567
 - power density of, 567
 - surface heat flux of, 567
- Advanced Toroidal Facility (ATF), 58, 227, 481
 - density fluctuations in, 481
 - long pulse discharge, 227
 - magnetic field geometry of, 481
 - steady-state operation of, 227
- Alpha particles, 318, 402
- AMBAL-M tandem mirror device, 111
- Anomalous transport, 40, 45, 52, 493
 - self-sustained turbulence, 52
- ARTEMIS D-³He reactor, 337, 467, 551, 563
- Ash pumping, 402, 406
 - dynamic model, 406
 - from TMR, 402, 406
 - from toroidal magnetic confinement systems, 406
- Axial potential confinement, 111

B

- Bootstrap current, 79, 186, 428, 432
 - driven by ohmic seed current, 432
- Boozer coordinates, 397, 451

C

- Cable-in-conduit superconductors, 575
 - stability analysis of, 575
- Carbon sheet pump (CSP), 523
- CASTOR tokamak, 473
- Cluster beam injection, 540
 - for fueling, 540
 - for heating/current drive, 540
- Coaxial helicity injection (CHI) current drive, 333, 387
 - HIST, 387
- Coil systems, 186, 194, 571
- Coil winding methods, advanced, 571
- Compact Auburn Torsatron (CAT), 202
- Compact Helical System (CHS) heliotron/torsatron, 58, 178, 231, 235, 239, 244, 248
 - edge density profiles in, 235, 248
 - electron power deposition in, 248
 - high-beta plasma in, 235
 - ICRF heating experiment, 244, 248
 - magnetic configuration effect, 231
 - MHD modes in, 231
 - NBI plasmas in, 231, 239
 - particle confinement in, 239
 - transport analysis and modeling, 252
- Compact tokamak, 97, 144
 - steady state, 144
- Compact toroid, 97, 329, 345, 382
 - FIX device, 345
 - TS-3 device, 97
- Computer codes, 182, 278
 - DESCUR Fourier transformation of field line location code, 182
 - HINT finite three-dimensional β -equilibrium code, 182
 - OPT transport scaling and device optimization code, 444
 - POPCON ignition modeling, 278
 - VMEC nonlinear three-dimensional analysis of shallow vacuum well code, 182, 235
- Confinement scaling laws, 444
 - DIII-D-JET, 444
 - DIII-D-OH, 444
 - DTEM, 444
 - Goldston L-mode, 444
 - H-mode, 444
 - ITER89-P, 444
 - Kaye-all-complex, 444
 - Kaye-Goldston, 444
 - Lackner-Gottardi, 444
 - L-mode, 444
 - Neo-Alcator, 444
 - Ohmic, 444
 - Rebut-Lallia, 444
- Counter-helicity merging, 374
- Current diffusion, 477
- Current drivers, 79, 85, 131, 150, 186, 190, 210, 239, 244, 256, 333, 387, 391, 409, 417, 423, 436, 477, 540
 - bootstrap current, 79, 186
 - CHI, 333, 387
 - cluster beam injection, 540
 - ECRH, 169, 210, 219, 423

- Current drivers (continued)
 EOH, 477
 fast wave, 150, 436
 ICRF heating, 131, 244, 256, 409, 417, 423
 lower hybrid wave heating, 423
 NBI, 85, 190, 210, 239, 244, 256
 passive cyclotron current drive for tokamaks, 423
 rotating magnetic field used with an FRC, 391
- D**
- DIII-D tokamak, 150, 444
 DIII-D-JET confinement scaling law, 444
 DIII-D-OH confinement scaling law, 444
 D-³He fusion, 28, 337, 397, 402, 467, 551, 555, 559, 563, 567
 ARTEMIS D-³He reactor, 337, 467, 551, 563
 direct energy conversion, 551, 563, 567
 fuel, 28
 fusion reactivity, 555
 reactor based on an FRC, 337
 reactor based on a tandem mirror, 397, 402
 safety and environmental considerations of, 28, 397
 start-up heating, 559
 tail effects on, 559
 Deuterium-tritium (D-T) fusion, 131, 547
 Diagnostics, 219, 282, 297, 409, 481
 GAMMA 10 tandem mirror for, 409
 ion temperature, 297
 magnetic, 219
 microwave scattering, 2-mm, 481
 NPA, 297
 plasma density profile, 282
 Diffusion coefficients, induced selective stochastic transversal, 406
 Diode mapping method, 206
 Direct energy conversion, 551, 563, 567
 advanced fuels, for, 567
 $E \times B$ drift, 563
 Discharge, long pulse, in ATF, 227
 Discharge cleaning, 244, 532
 ECR discharge cleaning, 244
 using local island divertor in LHD, 532
 Disruption control by helical magnetic field, 459
 Dissipative trapped electron mode (DTEM), 444, 481
 confinement scaling law, 444
 Divertors, 123, 206, 314, 515, 519, 532, 536
 functions, 123
 helical divertor for LHD, 519
 Heliotron E, 206
 ion cyclotron resonance frequency fields, for helium recycling control, 536
 island divertor for LHD, 519, 532
 LHD, innovations in, 519
 Local Island Divertor, 532
 magnetic geometries of, 519
 poloidal RFP, 314
 rf advanced concept, 515
 DRACON fusion reactor, 547
 DRACON neutron source, 547
 Drift, 45, 202, 252, 481, 501, 563
 $E \times B$ drift, 563
 islands, 202
 surface mapping, 202
 waves, 45, 252, 481, 501
 Drift wave turbulence models, 252
 Dynamo action, 318
- E**
- $E \times B$ ion drift, 563
 Edge density profiles in CHS, 235
 Edge Ohmic Heating (EOH), 477
 Electron beam mapping, 202
 Electron cyclotron current drive, 150
 Electron cyclotron heating (ECH), 85, 169, 210, 270, 481, 497
 ATF, 481
 boronization technique, 85, 210
 L-2M Stellarator, 270
 Electron cyclotron resonance (ECR), 169, 210, 219, 244
 discharge cleaning, 244
 Electron cyclotron resonance heating (ECRH), 169, 210, 219, 248, 270, 423
 Electron inertia, 21
 Electron power deposition profile in CHS, 248
 Electron temperature, 248
 Electrostatic plasma potential, 413, 515
 Equilibrium analysis, toroidal, 314
 Equilibrium theory in spheromaks, 365
 Extrap T-1 device, 382
- F**
- Fast wave current drive, 150
 FBX, 378
 FBX-III burner reactor, 378
 Field-reversed configuration (FRC), 91, 104, 329, 337, 341, 345, 349, 353, 357, 369, 382, 391, 467, 551, 559, 563
 ARTEMIS reactor, 337, 467, 551, 563
 D-³He reactor, based on, 337, 467, 563
 equilibrium shape, 353
 Extrap type, 382
 formation of, 369
 global and local modes, 467
 lower hybrid drift instability, 341, 349, 353
 magnetic fields, 341, 467
 NBI, 559
 plasmas, 345, 349, 353, 357
 rotational instability, 357, 391
 start-up heating, 559
 tail effects, 559
 Field-reversed ion ring experiment, 104
 Field-reversed theta pinches, 91, 391
 Flux Amplification Compact Torus (FACT), 387
 Flux conserver, 361
 Force Free Helical Reactor (FFHR), 264
 FRC Injection Experiment (FIX) device, 345
 translation dynamics of, 345
 Free boundary plasma shift, 97, 219, 314
 Fuel cycles, 28
 Fueling methods, 540
 by cluster beam injection, 540
- G**
- GAMMA 10 tandem mirror device, 111, 409, 413
 MHD stability of, 409
 Goldston L-mode confinement scaling law, 444
- H**
- H-1 Heliac, 182, 282, 286
 magnetic configurations of, 286
 rf-produced plasmas in, 282
 H-mode characteristics, 32, 45, 190, 215, 413, 444, 489, 501
 CHS, of, 190
 HIEI tandem mirror, of, 413
 scaling law, 444
 torque conditions, effect on, 489
 W7-AS stellarator, 32
 HANBIT tandem mirror device, 111
 Heat pulse propagation, 497
 Heating, 131, 244, 256, 409, 417, 423, 540
 by cluster beam injection, 540
 by ECRH, 248, 270
 ICRF, 131, 244, 248, 256, 409, 417, 423
 tritium second harmonic cyclotron resonance ($2\Omega_T$), 131

Heliacs, 182, 186, 194, 282, 286
 H-1, 182, 282, 286
 HHHS, 186
 Modular Helias-like Heliac, 186
 TJ-II flexible heliac, 194
 Helias-Helias Hybrid Stellarator (HHHS), 186
 Helical coils, winding techniques, 194, 571
 Helically Symmetric Experiment (HSX), 273
 Helical systems, status of, 58
 Helicity Injected Spherical Torus (HIST), 387
 Helicity injected tokamak experiment, 333, 387
 Helicity injection, 333, 387
 Heliotron/torsatron devices, 58, 79, 85, 123, 178, 182, 186, 202, 206, 219, 223, 227, 231, 235, 248, 252, 256, 260, 264, 278, 515, 519, 523, 527, 532, 571
 ATF, 227
 CAT, 202
 CHS heliotron/torsatron, 58, 178, 231, 239, 244, 248, 252
 Heliotron DR, 202, 219
 Heliotron-E, 85, 206, 219, 223, 252
 LHD, 79, 123, 186, 256, 260, 264, 278, 515, 519, 523, 527, 532, 571
 status and prospects, 58
 Heliotron DR, 202, 219
 Heliotron-E, 58, 85, 206, 210, 219, 223, 252
 boronization of, 210
 diverted plasma parameters of, 223
 divertor, 206
 experimental results, 85
 potential structure, 85
 transport, 85, 210, 252
 Helium recycling, control of, 536
 HIEI tandem mirror device, 111, 417
 High-beta plasmas, 178, 219, 235, 329
 HT-6M tokamak, 477
 Hydrogen recycling, control of, in LHD, 523, 527
 CSP, use of, 523
 low Z films, use of, 527

I

Ignition, 278
 LHD, characteristics of, 278
 operation path method, 278
 Inductively-Operated Day-Long Tokamak (IDLT) reactor, 432
 Inertia, electron, 21

Instabilities, 21, 32, 45, 91, 111, 117, 161, 178, 202, 219, 252, 310, 341, 349, 353, 357, 387, 391, 409, 440, 455, 463, 467
 drift wave, 45, 202, 252
 flute, 117
 lower hybrid drift, in FRC plasmas, 341, 349, 353
 MHD, 32, 45, 91, 111, 117, 161, 178, 219, 310, 387, 409, 440, 455, 463, 467
 rotational, in FRC plasmas, 357, 391
 sawtooth, 21
 Interchangeable Module Stellarator (IMS), 215
 Interchange mode, of RFP plasmas, 310
 Interferometer, multichannel rotating wheel, 282
 International Center for Alternate Confinement Studies, 382
 International Thermonuclear Experimental Reactor (ITER), 3, 131, 428, 444, 540
 cluster ion beam injection for fueling and heating/current drive, 540
 development of, 3
 ICRF heating and current drive, 131
 ITER89-P confinement scaling law, 444
 outline design of, 3
 technological issues, 3
 tritium second harmonic cyclotron resonance ($2\Omega_T$) heating, 131
 Ion Bernstein waves, 131
 Ion cyclotron range of frequency (ICRF) heating, 131, 244, 248, 256, 409, 417, 423
 Ion cyclotron resonance frequency fields, use of, to control helium recycling, 536
 Ion-induced plasma flows, 215
 Ion rings, 104
 FIREX, 104
 formation of, 104

J

Joint European Torus (JET) plasmas, 509
 Joule dissipation, 391

K

Kaye-all-complex confinement scaling law, 444

Kaye-Goldston confinement scaling law, 444
 KT-2 large-aspect-ratio midsize diverted tokamak, 436
 PF system, for, 436

L

Lackner-Gottardi confinement scaling law, 444
 Large aspect ratio, 436
 Large Helical Device (LHD), 79, 123, 186, 256, 260, 264, 278, 515, 519, 523, 527, 532, 571
 coil winding methods, advanced, 571
 CSP for hydrogen recycling control, use of, 523
 discharge cleaning of plasma-facing surfaces, 532
 divertor innovations, 519
 hydrogen recycling, control of, 523, 527
 ICRF heating in, 256
 Local Island Divertor, 532
 low Z films for hydrogen recycling control, use of, 527
 magnetic geometries for divertor of, 519
 NBI heating in, 256
 negative ion source for, 256
 physics of, 260
 steady-state experiment, 123
 wall conditioning, 532
 Large s Experiment, 91
 Last closed flux surface, 235
 L/H transition physics, 485, 489
 L-2M Stellarator, 270
 L-mode confinement, 45, 52, 444, 485, 489
 Goldston L-mode confinement scaling law, 444
 Loss-cone boundaries, 413
 Low aspect ratio helical devices, 178, 239, 244
 CHS, 178, 239, 244
 Low aspect ratio tokamaks, 138, 361, 440
 Lower hybrid drift instability, 270, 341, 349
 Lower hybrid wave heating, 423
 Low Z films, 527
 coating technique for, 527
 use of for hydrogen recycling control, 527

M

Magnetic detection, 219
 Magnetic field fluctuations, 337, 455, 473, 489, 493

Magnetic field fluctuations
(continued)
 CASTOR tokamak, in, 473
 FRC, 337
 radial components of, 473
 root-mean-square value, 473
 stochasticity, 455, 493, 505
 Magnetic islands, 45, 202, 444, 505
 island overlapping model, 505
 Magnetic surface mapping, 198, 202,
 286, 505
 electron beam method, 202, 286
 separatrix mapping method, 505
 Magnetohydrodynamic (MHD) sta-
 bility, 32, 45, 91, 111,
 117, 161, 178, 219, 231,
 310, 387, 409, 440, 455,
 463, 467
 ballooning modes, 45, 117, 150
 characteristics, 161
 CHS, in, 231
 equilibrium state, 463
 FRCs, 467
 GAMMA 10 tandem mirror plas-
 mas, of, 409
 regimes, 91
 stellarator equilibria, 455
 Mapping, 198, 202, 206, 286, 455
 drift surface, of, 202
 electron beam technique, 202, 286
 magnetic flux surfaces, of, 202,
 286, 455
 magnetic surface, of, 198
 static beam-resistance method, 206
 Mercier criterion, 310
 Mirrors, 111, 117
 axisymmetric, 117
 tandem, 111,
 Modular Heliotron concept, 260
 Modularized Advanced Toroidal Fa-
 cility, 260
 Modulator, 551
 Multichannel rotating wheel interfer-
 ometer, 282

N

Neo-Alcator confinement scaling
 law, 444
 Neutral beam injection (NBI), 85,
 190, 210, 239, 244, 256
 NBI heating, 231, 244, 256
 Neutral particle energy analyzer
 (NPA), 297
 Nonlinear phenomena, 21
 Nuclear elastic scattering, 555

O

Ohmic confinement scaling laws, 444
 Ohmic seed current, 432
 OPT transport scaling and device op-
 timization code, 444

P

Particle confinement, 239, 264, 509
 CHS, 239
 ion loss, 509
 orbit simulations, 509
 Passive cyclotron current drive for
 tokamaks, 423
 Plasma focus device, 325
 Plasmas, 21, 28, 40, 45, 52, 79, 85,
 97, 123, 131, 150, 161,
 169, 178, 190, 198, 210,
 215, 219, 235, 239, 252,
 270, 282, 293, 297, 301,
 306, 310, 325, 329, 337,
 345, 353, 357, 361, 397,
 402, 406, 417, 428, 432,
 444, 455, 463, 477, 485,
 489, 493, 509, 515, 555,
 559
 axisymmetric, 463
 boundary conditions, 97, 219, 455
 confinement, 150, 210, 301, 306,
 417, 444, 477
 currentless steady state, 123, 270
 density profiles, 282
 D³He plasmas, 28, 337, 397, 402,
 406, 555, 559
 diagnostics, 219, 282
 disruption control, 459
 D-T, 131
 ECRH, 169, 198, 210, 219, 413
 edge-density profiles, electron, 235
 flow equilibrium, 463
 flows, measurement of, 215
 FRC plasma, 345, 349, 353, 357
 free boundary shift, 97, 219
 heliotron/torsatron, 79, 178
 high-beta, 178, 219, 235, 329
 hot-ion-mode, 409
 ion losses at tokamak plasma edge,
 509
 JET plasmas, 509
 kinetics model of D³He plasma in
 TMR, 402, 406
 KT-2 large aspect ratio, midsize,
 diverted tokamak, 436
 low aspect ratio tokamak plasma,
 361
 magnetic islands, 45, 202, 455
 magnetic stochasticity, 455, 493
 NBI, 85, 190, 210, 231, 239
 particle simulations of, 509
 potential structure, 85, 413, 515
 relaxation modes, 329
 RFP plasmas, 293, 297, 301, 306,
 310
 rotating, axisymmetric, 463
 spheromak, 325
 stellarator, 215
 stochastic regions, 455, 493
 tokamak, optimization of, 150,
 361, 428, 432, 509

toroidal, 52
 transport, 21, 40, 45, 85, 210, 252,
 417, 485, 489, 493
 ULART plasma, 161
 Poloidal divertor reversed field
 pinch, 314
 Poloidal field (PF) system, 436
 Ponderomotive force, 515
 Potentials, 85, 111, 413
 axial confinement of, 111
 electrostatic, 413, 515
 structure of, 85, 413, 515
 Power density of advanced fuels, 567

Q

Quasi-symmetry concept applied to
 helical toroidal systems,
 451

R

Radio frequency (rf), 131, 515
 Rebut-Lallia confinement scaling
 law, 444
 Recoil tail creation, 555, 559
 Recycling control, 523, 527, 536
 helium, 536
 hydrogen, in LHD, 523, 527
 Resonant magnetic perturbation, 459
 Reversed field pinch (RFP), 40, 293,
 297, 301, 306, 310, 314
 equilibrium of plasma, 310
 experiments in IFTES, 306
 physics problems of, 40
 plasma confinement parameters,
 301, 306
 poloidal divertor, 314
 rf divertor system, 515
 RFP devices, 40, 293, 297, 301, 306
 IFTES, 306
 MST², 40
 REPUTE-1, 297
 RFX, 40
 STE-2, 293
 T2, 40
 TPE1RM15, 301
 TPE1RM20, 40, 301
 TPE-2M, 40
 TPE-RX, 40
 Rotating magnetic field, 391

S

Saturn stellarator, 223
 Scaling laws, 297
 REPUTE-1 RFP plasma, of, 297
 Scrape-off layer, 473
 Separatrix, 91, 293, 505
 mapping method, 505

Separatrix Test Experiment (STE), 293
 global discharge parameters, 293
 STE-2 RFP device, 293
 Sawtooth instabilities, 21
 Self-sustained turbulence, 52
 Sheared plasma flows, 501
 Small Tight Aspect Ratio Tokamak (START), 144, 161, 382, 444
 OPT transport scaling and device optimization code, 444
 Spherical tokamak, 382
 Spheromak, 97, 104, 161, 325, 365, 369, 374, 382, 387
 equilibria, 365
 FACT, 387
 formation of FRC by, 369, 374
 free boundary, 97
 SPHEX experiment, 365
 Spheromak-like magnetic configuration, 325
 SPHEX, 365
 START device, 144, 161, 382, 444
 Steady-state operation, 144, 227
 ATF, 227
 START, 144
 Stellarators, 32, 58, 182, 186, 198, 202, 206, 215, 219, 223, 270, 273, 282, 451
 H-1, 182, 186, 282, 286
 heating system, 198
 helical axis stellarator, 186, 282
 Heliotron DR, 202, 219
 Heliotron-E, 85, 206, 219, 223
 HHHS, 186
 HSX, 273
 IMS, 215
 L-2M, 270
 magnetic surface mapping of, 198
 modular magnetic system, 264
 optimization of, 71
 parameters of, 198
 quasi-helically symmetric, 273
 quasi-symmetry, 451
