

## Editor's Note

In this issue, I am very pleased to introduce two articles that serve as a follow-on from the September 2021 *Nuclear Technology* special issue on the Nuclear, Humanities, and Social Science Nexus (volume 207, issue 9). These papers serve to extend that very important conversation. The editors of the special issue hope that these two works, plus all of the papers in the September 2021 issue, generate important conversations on the intersection between science and engineering and the social aspects of our critical technologies in the nuclear field.

*–Andrew Klein, Editor*
